# Dual Boot with Windows

# 1: Prepare installation media

- Download ubuntu iso file:
  - <https://ubuntu.com/download/desktop>
  - <http://dl.shatelland.com/software/97/05/23/Ubuntu%2018.04.1%20LTS.rar>
- Option 1: burn iso file into CD or DVD or buy it
- Option 2: make a bootable USB drive:
  - download Rufus: <https://rufus.ie/>
    - no installation needed!
  - Connect a USB drive with at least 2GB of free space
    - contents of this drive will be **erased!**
  - More details here: <https://www.howtogeek.com/howto/linux/create-a-bootable-ubuntu-usb-flash-drive-the-easy-way/>

## 2. Prepare Windows Machine

- Open disk management
- Shrink an existing drive to create free space
- More details here: <https://www.tecmint.com/install-ubuntu-alongside-with-windows-dual-boot/>

# VMware Workstation

# Virtual Machine

- A virtual OS inside your windows.
- Best for testing purposes
- Easy backup and restore points (Snapshots)
- Multiple OS's in one place (as far as hardware could support)

# VMware Workstation

- Download from <https://soft98.ir/os/virtual-machine/1232-vmware-workstation.html>
- Install and run
